

Suitably Impressive Thesis Title

Candidate Number: 1234567

University of Oxford

Word Count: 15000

A thesis submitted for the degree of

Master of Science in Advanced Computer Science

Trinity 2026

Abstract

Your abstract goes here. Check your departmental regulations, but this is usually expected to be under 300 words — roughly one page.

A workable structure is one paragraph per move: (1) context and why the problem matters, (2) the gap, (3) what you did, (4) what you found, and (5) what it means more broadly.

Acknowledgements

Thank your supervisors first, then anyone whose ideas or feedback shaped the direction of the work.

Then colleagues, collaborators, and friends.

Then any funding or institutional support you received.

Finally, family.

List of Figures

Chapter 1

Introduction

Open with two or three paragraphs that set the scene: what the general problem is, why it matters, and the specific gap in current understanding that this thesis addresses. Cite the key prior work here rather than deferring all of it to Chapter 2 [1].

1.1 Motivation

Explain in more depth why the gap identified above is worth closing. A useful pattern is to close this section by stating the motivation as a short numbered or lettered list: (i) ..., (ii) ..., (iii) ...

1.2 Contributions

This thesis makes the following contributions:

1. **First contribution.** One or two sentences on what it is and what it establishes.
2. **Second contribution.** ...
3. **Third contribution.** ...

If you have a single figure that summarises the whole pipeline or result, this is the place for it.

1.3 Thesis Overview

The thesis is structured as follows:

- **Chapter 2 – Background:** the foundations needed to follow the rest of the thesis.
- **Chapter 3 – Related Work:** prior literature, and where this work sits within it.
- **Chapter 4 – Method:** the methodology developed in this thesis.
- **Chapter 5 – Experiments and Results:** the empirical evaluation.
- **Chapter 6 – Conclusion:** findings, limitations, and future directions.

Chapter 2

Background

A short paragraph saying what this chapter covers and why each part is needed for the chapters that follow.

2.1 First Area

2.1.1 Foundational Concept

2.1.2 Second Concept

2.2 Second Area

2.2.1 Overview

2.2.2 Specific Method

Chapter 3

Related Work

Surveys prior literature and situates this thesis within it. Where Chapter 2 explains *how* things work, this chapter covers *who has done what*, and what remains open.

3.1 First Strand of Work

3.1.1 Early Approaches

3.1.2 Recent Developments

3.2 Second Strand of Work

3.2.1 Summary

Close by naming the gap this thesis fills.

Chapter 4

Method

Rename this chapter to the name of your method or framework — a descriptive title reads better than a generic “Method”.

4.1 Setup

4.2 Approach

4.2.1 Component One

4.2.2 Component Two

4.3 Implementation Details

Chapter 5

Experiments and Results

5.1 Experimental Setup

Datasets, baselines, metrics, and compute.

5.2 Main Results

5.3 Ablation Study

5.4 Additional Analysis

Chapter 6

Conclusion

6.1 Summary

Restate what was done and what was found, without introducing anything new.

6.2 Future Work

6.3 Critical Evaluation

An honest assessment of the limitations of the approach and of what you would do differently. Examiners reward candour here.

6.4 Relation to Materials Studied in the MSc Programme

Which courses and topics from the programme this project drew on, and how.

6.5 Personal Developments and Challenges

What you learned over the course of the project, and the difficulties you encountered along the way.

Appendix A

Supplementary Material

Appendices behave like chapters, but are lettered rather than numbered. Their sections, figures, tables and equations are numbered accordingly (A.1, Figure A.1, and so on) and appear in the table of contents.

A.1 Additional Analyses

A.2 Additional Experiments
